RECRUITMENT · AI SCREENING

Screening at volume, and who decides “no”

The situation

A large retail and logistics customer hires frontline staff in India, the United States and Germany. It receives around 400,000 applications a year for roughly 20,000 roles. Recruiters cannot read them all. The median applicant waits 9 days for a first response, and the customer says it loses its best candidates to competitors who reply within 48 hours.

They want an AI agent that reads every application, ranks candidates against the job, and rejects the bottom of the pile automatically. For the rest, it books interviews over WhatsApp and SMS. No recruiter is in the loop for this first stage. A competitor demonstrates exactly this, and two other customers have asked for the same.

Their head of talent acquisition wants it live before the next seasonal hiring peak, 4 months away. Their legal team has flagged that automated decisions about candidates are regulated in some of these countries, and has asked what we could show an auditor. One hiring manager in the pilot group has already said the agent would have rejected the best person he hired last year.

400k	20k	9 days	4 months
applications a year	roles filled	median first response	to seasonal peak

What you can assume

Assume an HR platform with a recruitment module: requisitions, career sites, candidate records, interview scheduling and offers. It converts hired candidates into employee records, integrates with job boards and messaging channels, and has a mobile app.

Candidates are not users in the way employees are. They have no login history, often apply from a phone, and may ask to see their data or ask why they were rejected.

You are not expected to know employment or AI regulation in these countries. Where a legal point matters, say what you would verify and with whom.

What to send us

REF	DELIVERABLE	FORMAT
D1	**Decision brief**	2 pages maximum
D2	**Build sheet**	2 pages maximum, including the impact table
D3	**Prototype and AI trail**	2 links, plus 3 lines

Ground rules

Where this case is silent, make an assumption, state it in one line, and carry on. If anything is unclear, or you need longer than 3 days, just ask us.
